

INFORMATION SCIENCE AND ENGINEERING

SCHEME and SYLLABUS

OF

V and VI SEMESTER B.E.

FOR THE A.Y: 2025-26

Vision of the College:

To develop thoughtful and creative young minds in a learning environment of high academic ambience by synergising spiritual values and technological competence.

Mission of the College:

1. To continuously strive for the total development of students by educating them in state-of-the-art-technologies and managerial competencies providing best in class learning experience with emphasis on skills, values and learning outcomes and helping them imbibe professional ethics and societal commitment.
2. To create research ambience that promotes interdisciplinary research catering to the needs of industry and society.
3. To collaborate with premier academic and research institutions and industries to strengthen multidisciplinary education, applied research, innovation, entrepreneurship and consulting ecosystems.

Vision of the Department:

To be a centre for quality education and research in Information Science and Engineering to create high quality professionals for catering to the need of the society.

Mission of the Department:

- 1) To enable students to acquire strong fundamental concepts related to the Information Science and Engineering through experiential learning.
- 2) To educate students towards state-of-the-art-technologies and multidisciplinary practices for a successful career by creating learning-teaching-learning ambience.
- 3) To inculcate life-long learning through innovation and research attitudes among students related to Information Science and Engineering.

Program Educational Objectives (PEOs):

The objectives of Information Science and Engineering degree program are to prepare students to meet the academic excellence, professionalism, and ability to solve a broad range of problems in rapidly changing technological, economic and social environment.

Graduates of the program will:

1. Pursue career as software engineer, project manager, data scientist, entrepreneur and pursue higher studies and research in Information Science and Engineering domains.
2. Apply mathematical, scientific and Information Science and Engineering knowledge with multidisciplinary approaches to solve real world problems.
3. Possess professionalism, ethical and societal responsibilities and engage in life-long learning through pursuit of skill development and certification courses in Information Science and Engineering.

Programme Outcomes (POs):

To achieve the above objectives, Information Science and Engineering degree programme strives to obtain the following outcomes which should be achieved by all graduates at the time of their graduation.

Engineering Graduates will be able to:

- PO1: Engineering Knowledge:** Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
- PO2: Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
- PO3: Design/Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
- PO4: Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- PO5: Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
- PO6: The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11: Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

Programme Specific Outcomes (PSOs):

- 1) **Computing System:** Demonstrate the knowledge of evolving hardware and/or software to develop solutions to real life computational problems with a focus on performance optimization.
- 2) **Communication and Security:** Design and develop solutions for providing efficient transmission, storage, security and privacy of data in diverse computing environment.
- 3) **Information management:** Apply tools and techniques for management of information system, data analysis and knowledge discovery in the process of decisionmaking.

**SCHEME and SYLLABUS
OF
V SEMESTER B.E.**

**INFORMATION SCIENCE AND ENGINEERING
FOR THE A.Y: 2025-26**

SCHEME OF TEACHING AND EXAMINATION: V Semester

Sl. No.	Course and Course Code		Course Title	Teaching / Paper setting Dept.	Teaching hrs./week				Examination				Credits
					Lecture	Tutorial	Practical/ Drawing	Self-Study Component	Duration in hrs.	CIE Marks	SEE Marks	Total Marks	
					L	T	P	S					
1.	HSMS	HSIS01	Software Engineering and Project Management	Dept.	3	0	0		3	50	50	100	3
2.	IPCC	S5ISI01	Artificial Intelligence and Machine Learning (Integrated)	Dept.	3	0	2		3	50	50	100	4
3.	IPCC	S5ISI02	Database Management System (Integrated)	Dept.	3	0	2		3	50	50	100	4
4.	PCCL	S5ISL01	Design Thinking and User Experience Lab	Dept.	0	0	2		3	50	50	100	1
5.	PEC	S5PEC01	Professional Elective Course-I	Dept.	3	0	0		3	50	50	100	3
6.	PROJ	S6ISMP	Mini Project / Extension Survey Project	Dept.	0	0	4		3	100	-	100	2
7.	AEC		Research Methodology and IPR (Board: IEM)	ME, IM, CH	2	2	0		3	50	50	100	3
8.	HSMS	HS06	Environmental Studies (Board: CV)	CV	2	0	0		3	50	50	100	2
9.	NCMC	HS	Soft Skills (Additional Course offered by SIT)	T&P	0	2	0		-	100	-	100	0
10.	NCMC	SMC01	National Service Scheme (NSS)	NSS CO	0	0	2			100	-	100	0
		SMC02	Physical Education (PE) (Sports and Athletics)	PED									
		SMC03	Yoga	PED									
			Total							550	350	900	22
		AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)	40 hours community service to be documented and produced for the examination									

Note: **HSMS:** Humanity and Social Science and management Course **IPCC:** Integrated Professional Core Course, **PCCL:** Professional Core Course laboratory, **PEC:** Professional Elective Course; **PROJ:** Project/Mini Project; **AEC:** Ability Enhancement Course; **NCMC:** Non-Credit Mandatory Course, **L:** Lecture, **T:** Tutorial, **P:** Practical **S= SDA:** Skill Development Activity, **CIE:** Continuous Internal Evaluation, **SEE:** Semester End Evaluation.

Professional Elective Course (PEC) (Offered by the Department)

S5ISPEC011	Data Communication	S5ISPEC013	Computer Vision
S5ISPEC012	Data Science	S5ISPEC014	Industrial Internet of Things and Applications

Professional Core Course (IPCC): Refers to Professional Core Course Theory Integrated with practical of the same course. Credit for IPCC can be 04 and its Teaching–Learning hours (L : T : P) can be considered as (3 : 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper. For more details, the regulation governing the Degree of Bachelor of Engineering (B.E.) 2022-23 may please be referred.

National Service Scheme /Physical Education/Yoga: All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE)(Sports and Athletics), and Yoga(YOG) with the concerned coordinator of the course during the first Week of III semesters. Activities shall be carried out between III semester to the VI semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the Degree. The events shall be appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, and Yoga activities. These courses shall not be considered for

vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of Degree.

Mini-project work: Mini Project is a laboratory-oriented/hands on course that will provide a platform to students to enhance their practical knowledge and skills by the development of small systems/applications etc. Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary Mini-project can be assigned to an individual student or to a group having not more than 4 students.

CIE procedure for Mini-project:

- (i) **Single discipline:** The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two faculty members of the Department, one of them being the Guide. The CIE marks awarded for the Mini-project work shall be based on the evaluation of the project report, project presentation skill, and question and answer session in the ratio of 50:25:25. The marks awarded for the project report shall be the same for all the batches mates.
- (ii) **Interdisciplinary:** Continuous Internal Evaluation shall be group-wise at the college level with the participation of all the guides of the project. The CIE marks awarded for the Mini-project, shall be based on the evaluation of the project report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

No SEE component for Mini-Project.

Professional Elective Courses (PEC): A professional elective (PEC) course is intended to enhance the depth and breadth of educational experience in the Engineering and Technology curriculum. Multidisciplinary courses that are added supplement the latest trend and advanced technology in the selected stream of Engineering. Each group will provide an option to select one course. The minimum number of students' strengths for offering a professional elective is 10. However, this conditional shall not be applicable to cases where the admission to the program is less than 10.

Software Engineering and Project Management

Contact Hours/ Week:	3L	Credit:	3
Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	HSIS01	SEE Marks:	50

Course objectives:

This course will enable students to:

1. Comprehend Software Development Life Cycle for software development.
2. Discuss an idea of using various process models in the software industry according to given circumstances.
3. Realize how Analysis, Design, Implementation and Maintenance processes are conducted in a software project.
4. Explore the basics of software project management concepts, principles and practices.
5. Apply different methods of estimation for software project development and management.

UNIT I

Software And Software Engineering: The Nature of Software, Software Engineering, The Software Process, Software Engineering Practice.

The Software Process: Process Models: A Generic Process Model, Defining a Framework Activity, Identifying a Task Set, Process Assessment and Improvement, Prescriptive Process Models, The Waterfall Model, Prototyping Process Model, Evolutionary Process Model, Unified Process Model, Product and Process.

Agility And Process: What Is Agility? Agility and the Cost of Change, What Is an Agile Process? Agility Principles The Politics of Agile Development, Scrum, Scrum Teams and Artifacts, Sprint Planning Meeting, Daily Scrum Meeting, Sprint Review Meeting, Sprint Retrospective.

Self-Study Components: Other Agile Frameworks, The XP Framework, Kanban, DevOps.

8 Hours

UNIT II

Understanding Requirements: Definition of Requirements Engineering, Establishing the Groundwork, Requirements Gathering, Collaborative Requirements Gathering, Usage Scenarios, Elicitation Work Products, Developing Use Cases, Building the Analysis Model, Elements of the Analysis Model, Analysis Patterns, Negotiating Requirements, Requirements Monitoring and Validating Requirements.

Requirements Modeling: Requirements Analysis, Overall Objectives and Philosophy, Analysis Rules of Thumb, Analysis Rules of Thumb, Requirements Modeling Principles, Scenario-Based Modeling, Actors and User Profiles, Creating Use Cases, Documenting Use Cases, Class-based Modelling Identifying Analysis Classes, Defining Attributes and Operations, UML Class Models, Class-Responsibility-Collaborator Modeling.

8 Hours

UNIT III

Design Concepts: Definition of software design, Design Within the Context of Software Engineering, The Design Process- Software Quality Guidelines and Attributes, The Evolution of Software Design, Design Concepts- Abstraction, Architecture, Patterns, Separation of Concerns, Modularity, Information Hiding, Functional Independence, Stepwise Refinement, Refactoring, Design Classes, Design Model- Design Modeling Principles, Data Design Elements, Architectural Design Elements, Interface Design Elements, Component-Level Design Elements, Deployment-

Level Design Elements.
Architectural Design: Software Architecture, Agility and Architecture, Architectural Styles, Architectural Considerations.
Component-Level Design: What Is a Component, What Is a Component?, An Object-Oriented View, The Traditional View, A Process-Related View, Designing Class-Based Components- Basic Design Principles, Component-Level Design Guidelines, Cohesion, Coupling.
8 Hours

UNIT IV
Software Quality Metrics:
Software Metrics And Analytics: Software Measurement, Measures, Metrics, and Indicators, Attributes of Effective Software Metrics, Software Analytics, Product Metrics, Metrics for the Requirements Model.
Project Management Concepts: The Management Spectrum, The People, The Product, The Process, The Project, People, The Stakeholders Team Leaders, The Software Team, Coordination and Communications Issues, Product Software Scope, Problem Decomposition, Process, Melding the Product and the Process, Process Decomposition, Project, The W5HH Principle, Critical Practices.
8 Hours

UNIT V
Creating A Viable Software Plan: Comments on Estimation, The Project Planning Process, Software Scope and Feasibility, Resources, Human Resources, Reusable Software Resources, Environmental Resources, Data Analytics and Software Project Estimation, Decomposition and Estimation Techniques, Software Sizing, Problem-Based Estimation, An Example of LOC-Based Estimation, An Example of FP-Based Estimation, An Example of Process-Based Estimation, An Example of Estimation Using Use Case Points, Reconciling Estimates, Estimation for Agile Development.
Project Scheduling: Basic Principles, The Relationship Between People and Effort, Defining a Project Task Set, A Task Set Example, Refinement of Major Tasks, Defining a Task Network Scheduling Time-Line Charts, Tracking the Schedule.
8 Hours

TEXT BOOKS		
1	Roger. S. Pressman, Bruce R. Maxim	Software Engineering-A Practitioners approach. 9 th Edition, Tata-McGraw Hill. 2020,

REFERENCE BOOKS		
1	Pankaj Jalote	An Integrated Approach to Software Engineering. Narosa Publications, 2019.
2	Ilene Burnstein	Practical Software Testing: A Process-Oriented Approach, Springer International Edition, 2016.
3	Paul C. Jorgensen, Byron DeVries	Software Testing, A Craftsman's Approach, 5 th Edition, Auerbach Publications, 2021.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Describe and Apply Software Development Life Cycle and its different phases of software process.
CO2.	Apply the Requirements Engineering Techniques to paraphrase the actual requirements of applications.
CO3.	Apply the fundamental concepts and principles of Software Design in development of software.
CO4.	Describe the basics of software project management concepts, principles and practices.
CO5.	Apply and Analyze the different methods for estimation of software projects.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

		POs											PSOs		
		1	2	3	4	5	6	7	8	9	10	11	1	2	3

		3	3	3		2				2	2		3		

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING (Integrated)-Updated

Contact Hours/ Week:	3L+2P	Credits:	4
Total Lecture Hours:	42	CIE Marks:	50
Total Practical Hours:	26	SEE Marks:	50
Sub. Code:	S5ISI01		

Course objectives:

This course will enable students to:

1.	Understand fundamental concepts in Artificial Intelligence.
2.	Explore basic principles of AI such as problem solving, searching, knowledge representation and learning.
3.	Explain the role of agents in AI and structure of the agents.
4.	Analyze and identify significant characteristics of data sets for measurements.
5.	Understand and implement the training, testing, and validation phases of supervised and unsupervised learning algorithms.

UNIT I

Introduction: What is AI? Acting humanly: The Turing Test approach, Thinking humanly: The cognitive modelling approach, Thinking rationally: The “laws of thought” approach, Acting rationally: The rational agent approach.

Intelligent Agents: Agents and Environments, Rationality, Omniscience, learning, and autonomy, The nature of Environments: Specifying the task environment, Properties of task environments, The Structure of Agents; Agent programs, Simple reflex agents, Model-based reflex agents, Goal-based agents, Utility-based agents, Learning agents.

Solving Problems By Searching: Problem-solving agents; Well-defined problems and solutions, Formulating problems, Example problems; Toy problems, Real-world problems.

9 Hours

UNIT II

Solving Problems By Searching (Contd.): Searching for solution; Infrastructure for search algorithms, Measuring problem-solving performance, Uninformed search strategies, Uniform-cost search, Depth-limited search.

Adversarial Search: Games, Optimal Decisions in Games; The minimax algorithm.

Constraint Satisfaction Problems: Defining Constraint satisfaction problems; Example problem: Map coloring, Example problem: Job-shop scheduling.

9 Hours

UNIT III

Introduction: If Data had Mass, The Earth Would Be A Black Hole, Learning; Machine Learning, Types of Machine Learning, Supervised Learning; Regression, Classification, The Machine Learning Process.

Preliminaries: Some Terminology; Weight Space, The Curse of Dimensionality, Knowing What You Know; Overfitting, Training, Testing, and Validation Sets, The Confusion Matrix, Accuracy Metrics, The Receiver Operator Characteristic (ROC) Curve, Unbalanced Datasets, Measurement Precision, Testing Machine Learning Algorithms, Turning Data into Probabilities; Some Basic Statistics.

8 Hours

UNIT IV

Dimensionality Reduction: Linear Discriminant Analysis (LDA), Principal Components Analysis (PCA), Relation with the Multi-layer Perceptron, Kernel PCA, Methods Comparisons.

LEARNING WITH TREES: Using Decision Trees, Constructing Decision Trees, Classification and Regression Trees (CART); Gini Impurity, Regression in Trees, Classification Examples and Problems.

8 Hours

UNIT V

Probabilistic Learning: Nearest Neighbour Methods

Unsupervised Learning-Clustering: Introduction, Hierarchical Clustering, Agglomerative Clustering, The single Linkage Algorithm, The complete linkage Algorithm, The Average Linkage Algorithm, Partitional Clustering, Forgy's Algorithm, The k-means Algorithm, Vector Quantization, The K-Means Algorithm.

8 Hours

TEXT BOOKS

1	Stuart J. Russell and Peter Norvig	Artificial Intelligence, A Modern Approach, 3 rd Edition, Pearson India Education Services, 2015 (UNIT I and II).
2	Stephen Marsland	Machine Learning, An Algorithmic Perspective, 2 nd Edition, CRC Press, 2015 (UNIT III, IV and V).
3	Earl Gose, Richard Johnson Baugh, Steve Jost	Pattern Recognition, Image Analysis, Pearson Education, 1997 (UNIT V)

REFERENCE BOOKS

1	Elaine Rich, Kevin Knight:	Artificial Intelligence, 3 rd Edition, Tata McGraw Hill, 2009.
2	Christopher Bishop	Pattern Recognition and Machine Learning, CBS Publishers & Distributors- New Delhi.2006.
3	Tom M Mitchell	Machine Learning, McGraw-Hill, Inc. New York, NY, USA. 2013.

Sl. No.	Lab Programs /Topics Covered
1.	Write two Python programs to calculate the factorial of a given number n using following approaches: a) Iterative function b) Recursive function
2.	Write a Python function that checks whether a given integer is a prime number or not.
3.	Write a function that takes two lists as input, merges them, and returns a new list with unique elements only, maintaining the original order of first occurrence.
4.	Write a Python Program to perform the following searching functions: a. Linear Search b. Binary Search
5.	Write three separate Python functions to perform the following operations on 2D matrices: a) Addition b) Subtraction c) Transpose

6	Write a Python functions using Pandas to implement the following operations: - Create a DataFrame from a dictionary containing student names and their marks. - Add a new column for grades (e.g., A/B/C based on marks). - Filter out students with marks below 50. - Sort the DataFrame by marks in descending order.
7	Write a python program to implement the following Uninformed search algorithms: - Breadth First Search algorithm - Depth First Search Algorithm
8	You are given a road network where each road segment between two locations has an associated cost (e.g., time taken, distance travelled, or fuel consumption). You need to implement the Uniform Cost Search (UCS) algorithm to find the least-cost path from a starting location to a destination. The road network is represented as a graph where: - Nodes represent intersections or locations. - Edges represent the road segments connecting those locations, and each edge has a cost associated with it (e.g., travel time or distance). 
9	Write a python program to implement the Tic-Tac-Toe game and demonstrate the steps. Consider 3X3 board and minimum of two players. 
10	Write a python program to implement Map coloring problem using either Constraint Satisfaction problem method or by applying Graph coloring algorithm. Also apply the same algorithm to the following Map and validate the answers. a) Australian Map with three colors 

11	Demonstrate the implementation of the supervised probability based naïve Bayesian classifier and demonstrate the performance of the model with clear interpretation of confusion matrices and other performance metrics. Use IRIS dataset for demonstration of the Model performance.
12	Implement a Simple supervised Linear Regression model using the training data set. Assume the appropriate dependent and independent variables for regression analysis. Predict the scores on the test data. Print the MSE and R Squared Score (Coefficient of determination). Interpret the results. Consider Diabetes dataset downloaded from sklearn repository.
13	Implement a supervised Logistic Regression model using the training data set. Assume the appropriate dependent and independent variables for regression analysis. Predict the scores on the test data. The output should include Confusion Matrix, Accuracy, Error rate, Interpret the results. Consider an USER-DATA dataset downloaded from Kaggle repository.
14	Demonstrate the implementation of Linear discriminant analysis (LDA) technique for dimensionality reduction. Consider IRIS dataset from Kaggle repository.
15	Demonstrate the implementation of Principal component analysis (PCA) technique for dimensionality reduction. Consider IRIS dataset from Kaggle repository.
16	A telecommunications company is looking to predict customer churn (whether a customer will leave the service or not). Currently, the company has a huge dataset containing customer details, including their usage patterns, subscription plans, and support tickets. The company is struggling to identify the key factors contributing to churn, and therefore, struggles to take proactive measures to retain customers. Use the ID3 (Iterative Dichotomiser 3) decision tree algorithm to predict whether a customer will churn or stay, based on features such as: • Customer Age • Subscription Plan • Monthly Spend • Number of Support Tickets • Customer Satisfaction Score Demonstrate the performance of the model. Interpret the significance of Entropy and Information gain on model performance. Plot the complete tree constructed.
17	A large shopping mall wants to better understand its customer base to improve business performance across its stores. Currently, all customers are treated the same regardless of their spending habits or demographics, leading to missed opportunities for personalized services and promotions. Use k-Means clustering to segment mall customers based on demographic and behavioural attributes such as age, annual income, and spending score. Also provide the distinct customer groups and provide insights for the Personalized marketing.
18	A weather forecasting company wants to enhance its predictive capabilities by categorizing weather conditions based on historical weather data. Currently, the company only provides general weather forecasts, but there is an opportunity to improve their predictions by identifying patterns in weather data that correspond to specific conditions (such as sunny, rainy, or cloudy). By classifying weather conditions, the company can provide more precise and targeted weather forecasts for different locations and times of day. Use the k-Nearest Neighbors (k-NN) algorithm to classify weather conditions based on historical weather data. The goal is to predict weather conditions (such as Sunny, Rainy, Cloudy) for a given day, based on input features such as temperature, humidity, wind speed, and precipitation.

Course Outcomes:

Upon completion of this course the student will be able to:

Department of Information Science & Engg., Siddaganga Institute of Technology, Tumakuru

CO1.	Identify and Apply the knowledge representation techniques and problem-solving strategies to common Artificial Intelligence (AI) applications.
CO2.	Describe the structure of the agents and different types of agents commonly used in AI.
CO3.	Describe machine learning algorithms based on learning criteria and parameter employed for applications.
CO4.	Apply and illustrate the significances of dimensionality reduction techniques for supervised and unsupervised problem solving.
CO5.	Design applications to solve real world problems by applying machine learning algorithms such as classification, regression, and clustering.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

	POs												PSOs		
		1	2	3	4	5	6	7	8	9	10	11	1	2	3

AVG		2	2	2	2	3				2	3				2

Database Management Systems (Integrated)

Contact Hours/ Week:	3L+2P	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Total Practical Hours	26	SEE Marks:	50
Sub. Code:	S5ISI02		

Course objectives:

This course will enable students to:

1.	Explore the basic concepts of database and database management systems.
2.	Understand the fundamentals of relational system that includes data models, database architectures and ER diagram.
3.	Comprehend Structured Query Language (SQL) and design the queries in SQL.
4.	Describe the need of Normalization and use different types of Normalization while designing the databases.
5.	Explain and adopt the concepts of transaction management for the database management.

UNIT I

Databases and Database Users: Introduction, an example, characteristics of database approach. Actors on the screen, workers behind the scene. Advantages of using DBMS approach. A brief history of database applications, When not to use a DBMS.

Database System – Concepts and Architecture: Data models, schemas and instances, three-schema architecture and data independence. Database languages and interfaces. The database system environment. Centralized and client-server architectures. Classification of database management systems.

8 Hours

UNIT II

Entity-Relationship Model: Using high-level conceptual data models for database design, an example database application. Entity types, entity sets, attributes and keys, relationship types, relationship sets, roles and structural constraints, weak entity types, refining the ER design for the company database. ER diagrams, naming conventions and design issues.

7 Hours

UNIT III

SQL-The Relational Database Standard: SQL data definition and data types, schema and catalog concepts in SQL, the create table command in SQL, attribute data types and domains in SQL. Specifying attribute constraints and attribute defaults, specifying key and referential integrity constraints. Specifying basic constraints in SQL: giving names to constraints, specifying constraints on tuples using check. Schema change statements in SQL: the drop command, and the alter command. Basic queries in SQL: the select-from-where structure of basic SQL queries, ambiguous attribute names, aliasing, and tuple variables, unspecified where clause and use of the asterisk, tables as sets in SQL, substring pattern matching and arithmetic operators, ordering of query results. More complex SQL queries: comparisons involving null and three-valued logic, nested queries, tuples, and set/multi-set comparisons, correlated nested queries, the exists and unique functions in SQL. Explicit sets and renaming of attributes in SQL, joined tables in SQL, aggregate functions in SQL. Grouping: the group by and having clauses, discussion and summary of SQL queries. Insert, delete statements in SQL, delete and update statements in SQL, additional features of SQL, specifying general constraints as assertion and views (virtual tables) in SQL.

9 Hours

UNIT IV

Database Design: Informal design guidelines for relation schemas semantics of the attributes, reducing the redundant information in tuples. Informal design guidelines for relation schemas reducing the null values in tuples, disallowing the possibility of generating spurious tuples. Definition of functional dependencies, inference rules for functional dependencies. Functional dependencies, equivalence of sets of functional dependencies, minimal sets of functional dependencies. Normal forms based on primary keys, normalization of relations, practical use of normal forms. General definitions of first and second normal forms with examples. General definitions of third normal form with examples. Boyce-codd normal form with examples.

8 Hours**UNIT V**

Transaction Processing Concepts: Introduction to transaction processing single-user versus multi-user transactions, read and write operations and DBMS buffers. Need of concurrency control and recovery. Transaction and system concepts transaction states and additional operations, system log and commit point. Desirable properties of transactions – ACID properties and characterizing schedules based on recoverability.

8 Hours**TEXT BOOKS**

1	Elmasri and Navathe	Fundamentals of Database Systems, 7 th Edition, McGraw Hill, 2017.
---	---------------------	---

REFERENCE BOOKS

1	Silberschatz, Korth and Sudharshan	Data Base System Concepts, 7 th Edition, McGraw Hill, 2019.
2	Raghu Ramakrishnan and Johannes Gehrke.	Database Management Systems, 3 rd Edition, McGraw-Hill, 2022.

List of Problems for Laboratory

1	Consider the following schema for a Library Database: BOOK (Book_id, Title, Publisher_Name, Pub_Year) BOOK_AUTHORS (Book_id, Author_Name) PUBLISHER (Publisher_Name, Address, Phone) BOOK_COPIES (Book_id, Branch_id, No-of-Copies) BOOK_LENDING (Book_id, Branch_id, Card_No, Date_Out, Due_Date) LIBRARY_BRANCH (Branch_id, Branch_Name, Address) BORROWER (Card_no, Name, Address, Phone) Write SQL queries to - Retrieve details of all books in the library – id, title, name of publisher, authors, number of copies in each branch, etc. - Get the particulars of borrowers who have borrowed more than 3 books from Jan 2018 to Jan 2019. - Delete a book in BOOK table. Update the contents of other tables to reflect this data manipulation operation. - Partition the BOOK table based on year of publication. Demonstrate its working with a simple query. - Create a view of all books and its number of copies that are currently available in the Library.
2	Consider the following schema for Order Database:

	SALESMAN (Salesman_id, Name, City, Commission) CUSTOMER (Customer_id, Cust_Name, City, Grade, Salesman_id) ORDERS (Ord_No, Purchase_Amt, Ord_Date, Customer_id, Salesman_id) Write SQL queries to - Count the customers with grades above Bangalore's average. - Find the name and numbers of all salesmen who had more than one customer. - List all salesmen and indicate those who have and don't have customers in their cities (Use UNION operation). - Create a view that finds the salesman who has the customer with the highest order of a day. - Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.
3	Consider the schema for Movie Database: ACTOR (Act_id, Act_Name, Act_Gender) DIRECTOR (Dir_id, Dir_Name, Dir_Phone) MOVIES (Mov_id, Mov_Title, Mov_Year, Mov_Lang, Dir_id) MOVIE_CAST (Act_id, Mov_id, Role) RATING (Mov_id, Rev_Stars) Write SQL queries to - List the titles of all movies directed by 'XYZ'. - Find the movie names where one or more actors acted in two or more movies. - List all actors who acted in a movie before 2020 and also in a movie after 2022 (use JOIN operation). - Find the title of movies and number of stars for each movie that has at least one rating. Sort the result by movie title. - Update rating of all movies directed by 'ABC' to 4.
4	Consider the schema for College Database: STUDENT (USN, SName, Address, Phone, Gender) SEMSEC (SSID, Sem, Sec) CLASS (USN, SSID) SUBJECT (Subcode, Title, Sem, Credits) IAMARKS (USN, Subcode, SSID, Test1, Test2, Test3, FinalIA) Write SQL queries to - List all the student details studying in fourth semester 'C' section. - Compute the total number of male and female students in each semester and in each section. - Create a view of Test1 marks of student USN '1SI24IS001' in all subjects. - Calculate the FinalIA (average of best two test marks) and update the corresponding table for all students. - Categorize students based on the following criterion: If FinalIA = 17 to 20 then CAT = 'Outstanding' If FinalIA = 12 to 16 then CAT = 'Average' If FinalIA < 12 then CAT = 'Weak' Give these details only for 8th semester A, B, and C section students.
5	Consider the schema for Company Database: EMPLOYEE (SSN, Name, Address, Sex, Salary, SuperSSN, DNo) DEPARTMENT (DNo, DName, MgrSSN, MgrStartDate) DLOCATION (DNo, DLoc) PROJECT (PNo, PName, PLocation, DNo)

	WORKS_ON (SSN, PNo, Hours) Write SQL queries to - Make a list of all project numbers for projects that involve an employee whose last name is 'raj', either as a worker or as a manager of the department that controls the project. - Show the resulting salaries if every employee working on the 'AI' project is given a 10 percent raise. - Find the sum of the salaries of all employees of the 'IS' department, as well as the maximum salary, the minimum salary, and the average salary in this department - Retrieve the name of each employee who works on all the projects controlled by department number 5 (use NOT EXISTS operator). - For each department that has more than five employees, retrieve the department number and the number of its employees who are making more than Rs. 60,00,000.
	Instructions for Open Ended Project Execution: Develop a database application using Oracle/MySQL
	Please note the following conditions. - Mini project should give proper idea about the application for which it is developed. - Maximum 3/4 students per team. No team is allowed to do the same project. - The front end has to be created with any programming language with proper design. - Students must: - Create schema and insert the records for each table. Add appropriate database constraints. - Implement, analyze and evaluate the project developed for an application. - Create, update, delete and query on the database. - Demonstrate the working of different concepts of DBMS. - Must be able to generate reports.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Describe database concepts, architecture and applications.
CO2.	Analyze and Design ER diagram and Schema based on customer/application's requirements.
CO3.	Create SQL queries for a given schema.
CO4.	Apply normalization techniques for the given database application.
CO5.	Describe and Adopt the transaction processing concepts for a given database.

Design Thinking and User Experience Laboratory

Contact Hours/ Week:	2P	Credits:	1.0
Total Practical Hours:	26	CIE Marks:	50
Sub. Code:	S5ISL01	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand the standardized innovation process to develop creative solutions to the identified problems.
2.	Think creatively and develop decision-making capability while design and developing the identified problem.
3.	Create user experiences that truly resonate with the users and deliver high business impact.

Activity based learning:

Form a group (4-5 students in each group)

Assign a problem statement for each group (considering different domains)

Some of the examples of problem statements are

- Development of chatBot.
- Touch Screen Based Home Automation System
- Wireless Electronic Notice Board Using GSM
- Wireless message Communication Between Two Computers
- Train Collision Avoidance System
- Ultrasonic Sensor Based Parking Guidance System
- Mobile Charger Design Using Solar Power
- Animation creation
- Image generation

Introduction: Design thinking is a human-centered approach to innovation that draws from the designer's toolkit to integrate the needs of people, the possibilities of technology, and the requirements for business success. The five major phases of design thinking are:

1. **Empathize:** Understand the needs of users.
2. **Define:** Clearly articulate the problem that needs to be solved.
3. **Ideate:** Brainstorm a wide range of possible solutions.
4. **Prototype:** Build tangible representations for a subset of ideas.
5. **Test:** Test solutions with users to get feedback and iterate.

For each lab session common to all groups, map the activities to these phases as follows:

Lab Session 1: Introduction to Design Thinking

- **Empathize:** Introduction to understanding user needs through interviews and observations.
- **Define:** Initial discussions on how to frame the problems based on user insights.

Lab Session 2: User Research

- **Empathize:** Conducting user interviews, surveys, and observations to gather deep insights.
- **Define:** Begin to identify patterns in user needs and behaviors.

Lab Session 3: Problem Definition

- **Define:** Refining and synthesizing research findings into a clear problem statement.
- **Ideate:** Initial brainstorming on possible solutions based on the problem statement.

Lab Session 4: Brainstorming Solutions

- **Ideate:** Intensive brainstorming sessions to generate a wide array of potential solutions.
- **Prototype:** Select a few promising ideas to start sketching and planning prototypes.

Lab Session 5: Prototyping

- **Prototype:** Create low-fidelity prototypes (e.g., paper prototypes, wireframes) of selected ideas.
- **Test:** Informal testing of prototypes within the group to get initial feedback.

Lab Session 6: Feedback and Iteration

- **Test:** Conduct user testing sessions with prototypes to gather feedback.
- **Empathize:** Re-evaluate user needs based on feedback.
- **Define:** Refine the problem statement if necessary.
- **Ideate:** Adjust and generate new ideas if the initial ones were not effective.
- **Prototype:** Iterate on the prototypes based on feedback.

Lab Session 7: Advanced Prototyping

- **Prototype:** Develop higher-fidelity prototypes (e.g., functional models, detailed wireframes).
- **Test:** Plan for more extensive user testing sessions.

Lab Session 8: Final Testing and Presentation

- **Test:** Conduct final round of user testing.
- **Empathize:** Final reflections on user needs and how well the solutions address them.
- **Define:** Final adjustments to the problem statement based on comprehensive feedback.
- **Ideate:** Any last-minute brainstorming if new insights are discovered.
- **Prototype:** Final refinements to prototypes.
- **Presentation:** Prepare and present the final solutions, documenting the design thinking process.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Develop ideas/problem identification skills to respond to user needs with appropriate and creative solutions.
CO2.	Apply the Design Thinking methodology to solve the identified/given problems.
CO3.	Analyze an identified/given ideas/problem to gather the required information for design and development.
CO4.	Apply analytical, critical and creative thinking to transform ideas/problems into visuals and prototypes.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

Data Communication

(Professional Elective Course -1)

Contact Hours/ Week:	3L	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S5PEC011	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand the basic concepts of data communications for real-world.
2.	Analyze and comprehend the layered architecture of TCP/IP protocol and OSI model for Internet.
3.	Understand physical layer characteristics and usage in communication networks.
4.	Learn the importance of data link layer and services offered for reliable communication in the Internet.
5.	Explore the data link control and medium access control protocols for real world scenario.

UNIT I

Data Communications and Network Models

Data Communications: Components, Data Representation, Data Flow. Networks: Network Criteria, Physical Structures. Network types: LAN, WAN, Internet.

Network Models

Protocol Layering: Scenarios, Principles of Protocol Layering, Logical Connections. TCP/IP Protocol Suite: Layered Architecture, Layers In the TCP/IP Protocol Suite, Description of Each Layer, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing. The OSI model: OSI versus TCP/IP, Lack of OSI model's success.

8 Hours

UNIT II

Introduction To Physical Layer

Data and Signals: Analog and Digital Data, Analog and Digital Signals, Periodic and non-periodic. Periodic Analog signals: Sign wave, phase, wavelength, Time and frequency domains, composite signals, Bandwidth. Digital signals: Bit rate, bit length, Digital signal as a composite analog signal, Transmission of Digital signals. Transmission Impairment: Attenuation, Distortion, Noise.

8 Hours

UNIT III

Introduction To Physical Layer

Data rate limits: Noiseless channel, noisy channel. Performance: Bandwidth, throughput, latency, bandwidth-delay product and jitter.

Digital Transmission

Digital-to-digital conversion: line coding, Line coding schemes. Analog to digital conversion: PCM, DM. Transmission modes: Parallel Transmission and serial transmission.

Switching

Introduction: Three methods of switching, Switching and TCP/IP layers. Packet switching: Datagram networks and virtual circuit networks.

8 Hours

UNIT IV

Introduction to Data link Layer

Introduction: Nodes and links, services, Two categories of links, Two sub layers.

Error Detection & Correction

Introduction: Types of Errors, Redundancy, Detection Versus Correction. Cyclic Codes: Cyclic Redundancy Check, Polynomials, Cyclic Code Encoder Using Polynomials. Checksum: Concept.

8 Hours**UNIT V****Data link Control (DLC)**

DLC Services: Framing, Flow and Error Control, Connectionless and Connection-Oriented. Data-link layer Protocols: Simple protocol, Stop-and-wait protocol, piggybacking.

Media Access Control (MAC)

Random Access: Aloha, CSMA, CSMA/CD, CSMA/CA. **Controlled Access:** Reservation, Polling, Token Passing. **Channelization:** FDMA, TDMA, CDMA.

8Hours**TEXT BOOKS**

1	Behrouz A. Forouzan	Data Communications and Networking, Tata McGraw-Hill, 5 th Edition, 2017.
---	---------------------	--

REFERENCE BOOKS

1	Alberto Leon Garcia	Communication Networks: Fundamental Concepts & key Architectures, Tata McGraw – Hill, 10 th Edition, 2004.
2	William Stallings	Data and Computer Communication, Pearson Education, 10 th Edition, 2017.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Describe and Analyze the basics of data, signal types with transmission principles, topologies and layered architecture with internet protocol suits.
CO2.	Analyze the physical layer characteristics, its performance and associated problems in caring data in networks.
CO3.	Apply and Demonstrate error detection and correction coding techniques, with adoption of modulation, and multiplexing techniques for real-world applications.
CO4.	Analyze digital and analog transmission of data and different types of switching.
CO5.	Describe and Apply medium access control and data link control protocols for the given real world scenario.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

Batch: 2023-24															
	POs												PSOs

Data Science
(Professional Elective Course -2)

Contact Hours/ Week:	3L	Credits:	3
----------------------	----	----------	---

Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S5PEC012	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Explain the concept of data science, its scope in business and available techniques.
2.	Analyze Predictive modeling and supervised segmentation models for churn and tree induction problems.
3.	Explore the concept of Classification to classify a given data set.
4.	Describe the concept of similarity, neighbors and clustering for apply it to any real world data.
5.	Apply the concepts of mining text and other data science tasks and techniques.

UNIT I

Business Problems and Data Science Solutions: From Business Problems to Data Mining Tasks, Supervised Versus Unsupervised Methods, Data Mining and Its Results, The Data Mining Process, Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Deployment, Other Analytics Techniques and Technologies: Statistics, Database Querying, Data Warehousing, Regression Analysis, Machine Learning and Data Mining.

Textbook 1: Chapter 1,2

8 Hours

UNIT II

Introduction to Predictive Modeling: From Correlation to Supervised Segmentation Models, Induction, and Prediction, Supervised Segmentation, Selecting Informative Attributes Example: Attribute Selection with Information Gain, Supervised Segmentation with Tree- Structured Models, Visualizing Segmentations, Trees as Sets of Rules, Probability Estimation, Example: Addressing the Churn Problem with Tree Induction.

Textbook 1: Chapter 3

8 Hours

UNIT III

Fitting a Model to Data: Classification via Mathematical Functions: Linear Discriminant Functions, Optimizing an Objective Function, An Example of Mining a Linear Discriminant from Data, Linear Discriminant Functions for Scoring and Ranking Instances, Support Vector Machines briefly, Regression via Mathematical Functions, Class Probability Estimation and Logistic “Regression”.

Logistic Regression: Some Technical Details. Example: Logistic Regression versus Tree Induction, Non Linear Functions, Support vector machines and Neural Networks

Over fitting and Its Avoidance: Fundamental Concepts, Exemplary Techniques, Regularization, Generalization, Over fitting, Over fitting Examined.

Textbook 1: Chapter 4,5

8 Hours

UNIT IV

Similarity, Neighbors, and Clusters: Similarity and Distance, Nearest-Neighbor Reasoning, Example: Whiskey Analytics, Nearest Neighbors for Predictive Modeling, How Many Neighbors

and How Much Influence? Geometric Interpretation, Overfitting, and Complexity Control. Issues with Nearest-Neighbor Methods. Some important Technical Details Relating to Similarities and neighbors. Clustering, Example: Whiskey Analytics Revisited, Hierarchical Clustering, Nearest Neighbors Revisited: Clustering Around Centroids. Understanding the Results of Clustering.

Textbook 1: Chapter 6

8 Hours

UNIT V

Decision Analytic Thinking I: What is a Good Model? Evaluating Classifiers Plain Accuracy and its Problems, The confusion matrix, Problems with unbalanced Classes, Problems with Unequal Costs and Benefits.

Representing and Mining Text: Why Text Is Important? Why Text Is Difficult? Representation, Bag of Words, Term Frequency, Measuring Sparseness: Inverse Document Frequency, Combining Them: TFIDF, Example: Jazz Musicians

Other Data Science Tasks and Techniques: Co-occurrences and Associations: Finding Items That Go Together, Measuring Surprise: Lift and Leverage, Example: Beer and Lottery Tickets, Associations Among Facebook Likes, Profiling: Finding Typical Behaviour, Link Prediction and Social Recommendation.

Textbook 1: Chapter 7,10,12

8 Hours

TEXT BOOKS

1	Foster Provost and Tom Fawcett	Data Science for Business, O'Reilly Media, 1 st Edition, 2013.

REFERENCE BOOKS

1	Rachel Schutt & Cathy O'Neil,	Doing Data Science O'Reilly Media, 1 st Edition, 2013.
2	Hector Cuesta	Practical Data Analysis, Packt, 1 st Edition, 2013.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Apply the knowledge of mathematics to describe the concept of data science.
CO2.	Analyze the given data set, and solve a problem by performing Classification using the basics of mathematics and data science methods.
CO3.	Apply the concepts of linear regression, logistic regression and other concepts on a given problem.
CO4.	Develop solutions to the problems related to supervised and unsupervised learning.
CO5.	Analyze the importance of data mining and formulate the association rules based on market basket analysis.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

	POs											PSOs

Computer Vision (Professional Elective Course -3)

Contact Hours/ Week:	3L	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S5PEC013	SEE Marks:	50

Course objectives:

This course will enable students to:

1. Explore the image processing techniques for computer vision.
2. Explain Hough Transform and its applications to detect lines, circles, ellipses.
3. Understand the shapes and region analysis.
4. Explore three-dimensional image analysis techniques, motion analysis and applications of computer vision algorithms.

UNIT I

Introduction:

Cameras: Pinhole Cameras, Radiometry – Measuring Light: Light in Space, Light Surfaces, Important Special Cases, Sources, Shadows, And Shading: Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo.

Inter reflections: Global Shading Models, Color: The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

8 Hours

UNIT II

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, Edge **Detection:** Noise, Estimating Derivatives, Detecting Edges, Texture: Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids.

Application: Synthesis by Sampling Local Models, Shape from Texture.

8 Hours

UNIT III

The Geometry of Multiple Views: Two Views, Stereopsis: Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, Segmentation by Clustering: What Is Segmentation?, **Human Vision:** Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering.

8 Hours

UNIT IV

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, Segmentation and Fitting Using Probabilistic Methods: Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, Tracking With Linear Dynamic Models: Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

8 Hours

UNIT V	
Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations. Geometric Camera Calibration: Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into Account, Analytical Photogrammetry, An Application: Mobile Robot Localization Model- Based Vision: Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification Application: Registration In Medical Imaging Systems Curved Surfaces and Alignment.	
8 Hours	

TEXT BOOKS		
1	David A Forsyth, Jean Ponce	Computer Vision – A Modern Approach, PHI Learning (Indian edition), 2 nd Edition, 2015.

REFERENCE BOOKS		
1	E. R. Davies	Computer and Machine Vision – Theory, Algorithms and Practicalities, Elsevier (Academic Press), 4 th Edition, 2013.

Course Outcomes:	
Upon completion of this course the student will be able to:	
CO1.	Describe fundamental image processing techniques required for computer vision.
CO2.	Apply shape analysis and Implement boundary tracking techniques to recognize objects.
CO3.	Apply chain codes and other region descriptors.
CO4.	Apply Hough Transform for line, circle, and ellipse detections.
CO5.	Describe the geometric camera elements, parameters and projections.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

Industrial Internet of Things and Applications (Professional Elective Course -4)

Contact Hours/ Week:	3	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S5PEC014	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand the significance of IoT in general to Industries.
2.	Gain insight into the IoT as a game changer with integrated value in industries.
3.	Apply the concept of IoT to develop solutions to different domains.
4.	Describe different IoT protocols and its significance in cloud platforms.
5.	Describe Digital Twin and its significance in emerging scenarios.

UNIT I

Introduction: Introduction to IoT, IoT Vs. IIoT, History of IIoT, Components of IIoT -Sensors, Interface, Networks, People & Process, Hype cycle, IOT Market, Trends & future Real life examples, Key terms of IoT-IoT Platform, Interfaces, API, clouds, Data Management Analytics, Mining & Manipulation; Role of IIoT in Manufacturing Processes Use of IIoT in plant maintenance practices, Sustainability through Business excellence tools Challenges and Benefits in implementing IIoT.

8 Hours

UNIT II

Architectures: Overview of IoT components: Various Architectures of IoT and IIoT, Advantages & disadvantages, Industrial Internet -Reference Architecture; IIoT System components: Sensors, Gateways, Routers, Modem, Cloud brokers, servers and its integration, WSN, WSN network design for IoT.

8 Hours

UNIT III

Sensors And Interfacing:

Introduction to sensors, Transducers, Classification, Roles of sensors in IIoT, Various types of sensors, Design of sensors, sensor architecture, special requirements for IIoT sensors, Role of actuators, types of actuators. Hardwire the sensors with different protocols such as HART, MODBUS-Serial & Parallel, Ethernet, BACnet, Current, M2M etc.

8 Hours

UNIT IV

Protocols And Cloud:

Need of protocols; Types of Protocols, Wi-Fi, Wi-Fi direct, Zigbee, Z wave, BACnet, BLE, Modbus, SPI, I2C, IIoT protocols –COAP, MQTT, 6LoWPAN, LWM2M, AMPQ IIoT cloud platforms: Overview of COTS cloud platforms, Predix, PTC Thing Worx, Microsoft Azure etc. Data analytics, cloud services, Business models: SaaS, PaaS, IaaS.

8 Hours

UNIT V**Digital Twin:**

Introduction to Digital Twin, need for Digital Twin, Elements of Digital Twin, Digital Twin process design and information requirements, Digital twin conceptual architecture -create, communicate, Aggregate, Analyze, Insight, Act, driving business value through digital twin.

8 Hours

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Apply the elements of IoT to build a total control plane in an Industry.
CO2.	Describe M2M protocols for the development of IoT Applications.
CO3.	Apply the concept of digitalization and data acquisition to develop the interface.
CO4.	Illustrate how to build smart factory based on the concepts of IoT.
CO5.	Describe and apply Industrial Digital Twins.

Professional Elective Course (PEC) (Offered by the Department)

S6ISPEC021	AWS Cloud	S6ISPEC023	Neurocomputing and Deep Learning
S6ISPEC022	Generative AI and Prompt Engineering	S6ISPEC024	File Structures

Professional Core Course (IPCC): Refers to Professional Core Course Theory Integrated with practical of the same course. Credit for IPCC can be 04 and its Teaching–Learning hours (L : T : P) can be considered as (3 : 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper. For more details, the regulation governing the Degree of Bachelor of Engineering (B.E.) 2022-23 may please be referred.

National Service Scheme /Physical Education/Yoga: All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE)(Sports and Athletics), and Yoga(YOG) with the concerned coordinator of the course during the first Week of III semesters. Activities shall be carried out between III semester to the VI semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the Degree. The events shall be

appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, and Yoga activities. These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of Degree.

Professional Elective Courses (PEC): A professional elective (PEC) course is intended to enhance the depth and breadth of educational experience in the Engineering and Technology curriculum. Multidisciplinary courses that are added supplement the latest trend and advanced technology in the selected stream of Engineering. Each group will provide an option to select one course. The minimum number of students' strengths for offering a professional elective is 10. However, this conditional shall not be applicable to cases where the admission to the program is less than 10.

Open Elective Courses:

Students belonging to a particular stream of Engineering and Technology are not entitled to the open electives offered by their parent Department. However, they can opt for an elective offered by other Departments, provided they satisfy the prerequisite condition if any. Registration to open electives shall be documented under the guidance of the Program Coordinator/ Advisor/Mentor. The minimum numbers of students' strength for offering Open Elective Course is 10. However, this condition shall not be applicable to class where the admission to the program is less than 10.

Project Phase-I : Students have to discuss with the mentor /guide and with their help he/she has to complete the literature survey and prepare the report and finally define the problem statement for the project work.

Big Data Analytics (Integrated)

Contact Hours/ Week:	3 +2 (3L+2P)	Credits:	4
Total Lecture Hours:	42	CIE Marks:	50
Total Practical Hours:	26	SEE Marks:	50
Sub. Code:	S6ISI01		

Course Objective

This course will enable students to:

1. Understand the types of digital data, the characteristics of big data, and the challenges confronting the enterprises embracing big data.
2. Explore the fundamental techniques and principles in achieving big data analytics with scalability, streaming capability and data ware housing.
3. Learn programming tools like PIG, Hive and HBase in Hadoop ecosystem for storage, analysis and manipulation of data.
4. Develop skills to solve complex real-world problems with MongoDB.

UNIT I

Getting an Overview of Big Data: What is Big Data? History of Data Management- Evolution of Big Data, Structuring Big Data- Types of Data, Elements of Data, Big Data Analytics: Advantages of Big Data Analytics.

Big Data Analytics: Introducing Technologies for Handling Big Data, Distributed and Parallel Computing for Big Data, Introducing Hadoop, Cloud Providers in Big Data Market, In-Memory Computing Technology for Big Data.

9 Hours

UNIT II

Understanding Hadoop Ecosystem: Hadoop Ecosystem, Hadoop Distributed File System, HDFS Architecture, MapReduce, Hadoop YARN, Introducing HBase- HBase Architecture, Regions, Storing Big Data with HBase, Interacting with the Hadoop Ecosystem, HBase in Operation-Programming with HBase, Combining HBase with HDFS.

Basic Concepts of Data Warehousing: What is a Data Warehouse? Differences between Operational Database Systems and Data Warehouses, Why Have a Separate Data Warehouse?

Data Warehouse Architecture: Steps for the Design and Construction of Data Warehouses, A Three-Tier Data Warehouse Architecture, Data Warehouse Back-End Tools and Utilities, Metadata Repository, Types of OLAP Servers: ROLAP versus MOLAP versus HOLAP.

9 Hours

UNIT III

Understanding Mapreduce Fundamentals And Hbase: The MapReduce Framework: Exploring the features of MapReduce, working of MapReduce, Exploring Map and Reduce Functions, Techniques to optimize MapReduce Jobs: Hardware/ Network Topology, Synchronization, File System, Uses of MapReduce, Role of HBase in Big Data Processing: Characteristics of HBase, Installation of HBase.

8 Hours

UNIT IV

Analysing Data With Pig: Introducing Pig: The Pig Architecture, Benefits of Pig, Properties of Pig, running Pig, Getting Started with Pig Latin, Working with Operators in Pig, Debugging Pig, Working with Functions in Pig, Error Handling in Pig. Introducing Hive, Getting Started with Hive: Hive Variables, Hive Properties, Hive Queries, Data Types in Hive, Built-in Functions in Hive, Hive DDL, Data Manipulation in Hive, Data Retrieval Queries, Using JOINS in Hive	
8 Hours	
UNIT V	
NoSQL Data Management: Introducing to NoSQL, Types of NoSQL Data Models, Characteristics of NoSQL, Schema-less Databases, Materialized Views, Distribution Models, CAP theorem, Sharding. Introduction to MongoDB: What is MongoDB? Why MongoDB? Terms used in RDBMS and MongoDB, Data types in MongoDB, MongoDB query language.	
8 Hours	

TEXT BOOKS		
1	DT Editorial Services	Big Data: Black Book, Dream Tech Press, 2016.
2	Seema Acharya, Subhashini Chellappan, Infosys Limited	Big Data and Analytics, Wiley India Private Limited, 2 nd Edition 2019.

REFERENCE BOOKS		
1	Alex Holmes	Hadoop in Practice, Manning Publications Co. 2 nd Edition, Sep. 2014.
2	Alan Gates	Programming Pig, O'Reilly, Kindle Publication. 2 nd Edition, Nov. 2016.
3	Dean Wampler	Programming Hive, O'Reilly, Kindle Publication, 1 st Edition, Sep. 2012.

List of Experiments:	
1	Conduct the following experiments using MapReduce in Apache Hadoop frameworks: - Installation of Apache Hadoop - Develop a MapReduce program to calculate the frequency of a given word in a given file. - Develop a MapReduce program to find the maximum temperature in each year.
2	Implement the following operations using Pig Operators/Functions: LOAD, DUMP, FOREACH, GROUP, DISTINCT, LIMIT, ORDER BY, JOIN, UNION, SPLIT, SAMPLE, AVG, MAX, COUNT, TUPLE, MAP, PIGGY BANK, PARAMETER SUBSTITUTION, DESCRIBE
3	Write a PIG script to load and store "Student data". (Student file contains Roll no, Name, Marks and GPA). - Filter all the students who are having GPA>5. - Display the name of all Students in Uppercase. - Group tuples of students based on their GPA. - Remove duplicate tuples of Student list. - Display first three tuples from "student" relation. - Display the names of students in ascending order. - Join two relations namely Student and department (Rno, DeptNo, DeptName) based on the values contained in the roll no column.

	h. Merge content of two relations Student and department. i. Partition a relation based on the GPA's acquired by students.
4	Perform Social media analysis using Cassandra. Here is the schema: Posts(post_id, content, likes, username) Likes(post_id, liked_by) Followers(username, followed_by) - Retrieve details from Posts, Likes, and Followers - Retrieve the username and likes for post id = 1 - Count the number of posts posted by 'Alice' - Retrieve posts with likes more than 10 - Retrieve the names of users who liked post with id = 1 - Count the number of followers of 'David' - Count the number of likes by 'Carol' - Find the total number of likes in table Posts
5	Implement a Buyer event analytics using Cassandra on suitable product sales data. Here is the schema: Purchases(id, username, product_name, quantity, product_date) Products(id, product_name, price) Users(username, email) - Retrieve all the details from purchases, products and users - Retrieve the product_name purchased by user "Alice" - Display the total quantity of product purchased by "Alice" - Retrieve the product_name and quantity purchased after "2025-01-01" - List the product names with cost less than 1000 - List the product names which were purchased before "2025-04-20" and after "2025-01-01" - Display the number of entries in users table
6	Implement and Perform Streaming Data Analysis using flume for data capture HIVE for data analysis of twitter data, chat data, weblog analysis etc.
7	Install and configure MongoDB to execute the following operations using NoSQL Commands. - Create a Student Master database with a collection called "Student" containing documents with some or all of the following fields: StudentRollNo, StudentName, Grade, Hobbies, and DOJ. - Perform the following operations on the database: - Insert 10 Records in the database. - Find the document wherein the "StudName" has value "Ajay Rathod". - Find all documents in proper format. (Without _Id field) - Retrieve only Student Name and Grade. - Retrieve Student Name and Grade of student who is having _id column is 1. - Add new field "Address" in Student Collection. - Find those documents where the Grade is set to 'VII'. - Find those documents where the Grade is not set to 'VII'. - Find those documents where the Hobbies is set to either 'Chess' or is set to 'Dancing'. - Find those documents where the Hobbies is set neither to 'Chess' nor is set to 'Dancing'. - Find those documents where the student name begins with 'M'.
8	Create a MovieMaker Database with a collection called "Movies" containing documents with some or all of the following fields: titles, directors, years, actors. Perform the

	following operations on the database (either in the console or using any programming language): - Retrieve all documents - Retrieve all documents with Director set to "Quentin Tarantino" - Retrieve all documents where actors include "Brad Pitt". - Retrieve all movies released before the year 2000 or after 2010. - Add a synopsis to "The Hobbit: An Unexpected Journey": "A reluctant hobbit, Bilbo Baggins, sets out to the Lonely Mountain with a spirited group of dwarves to reclaim their mountain home - and the gold within it - from the dragon Smaug." - Add a synopsis to "The Hobbit: The Desolation of Smaug": "The dwarves, along with Bilbo Baggins and Gandalf the Grey, continue their quest to reclaim Erebor, their homeland, from Smaug. Bilbo Baggins is in possession of a mysterious and magical ring."
9	Create a MongoDB database named ArrayFunctions with a collection called Arrays. Insert multiple documents representing users with the following fields: name: Name of the person (string) hobbies: List of hobbies (array of strings) scores: List of test scores (array of numbers) bio: A short bio about the person (string) Perform the following operations: - Insert at least three documents into the collection with the fields: name, hobbies, scores, and bio. - Retrieve all documents in the collection. - Find documents where the hobbies array includes "cycling". - Find documents where the scores array contains any value greater than 90. - Add a new hobby "jogging" to the user named "Bob" using an appropriate array update operation. - Add the score 93 to "Alice" only if it is not already in the array. - Remove the last hobby from the hobbies array of "Charlie". - Update the first score of "Alice" to 95. - Count the number of documents in the collection. - Use \$split to split the bio field of each document into an array of words.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Describe the different types of digital data, sources, challenges, elements and technologies for handling Big Data.
CO2.	Demonstrate the big data analytics operations using Hadoop Ecosystem, and data warehouse.
CO3.	Analyze MapReduce Fundamentals and role of HBase in Big Data Processing.
CO4.	Apply PIG scripts and HIVE commands with Hadoop Distributed File System to analyze stored Big Data.
CO5.	Create NoSQL Databases and analyze MongoDB for real-time scenarios.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

Applicable for the academic year 2025-26

	POs												PSOs

Computer Networks

Contact Hours/ Week:	3	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Total Practical Hours:	-	SEE Marks:	50
Sub. Code::	S6IS01		

Course Objectives

This course will enable students to:

1. Understand the working of network layer and routing algorithms.
2. Comprehend and use the IPV4 and IPV6 protocols in Internet.
3. Explore and Design subnet and different types of networks for any organization requirements
4. Realize the transport layer protocols, services and segments in real world.
5. Understand the application layer protocols, functionalities and usage.

UNIT I

Introduction to Network Layer: Network-Layer Services: Packetizing, Routing and Forwarding, Other Services. Packet switching: Datagram Approach-Connectionless Service, Virtual-Circuit Approach-Connection-Oriented Service. Network layer performance: Delay, Throughput, Packet Loss, Congestion Control, IPV4 Addresses: Address Space, Classful Addressing, Classless Addressing.

9 Hours

UNIT II

Introduction to Network Layer

Dynamic Host Configuration Protocol (DHCP), Network Address Resolution (NAT), Forwarding of IP Packets.

Network Layer Protocols

Internet Protocol (IP): Datagram Format, Fragmentation, Options, Security of IPv4 Datagrams.

Next Generation IP

IPv6 Addressing: Representation, Address Space, Address Space Allocation, Auto configuration, Renumbering. The IPv6 Protocol: Packet Format, Extension Header. Transition from IPv4 to IPv6: Strategies.

9 Hours

UNIT III

Unicast Routing

Introduction: General Idea, Least-Cost Routing. Routing Algorithms: Distance-Vector Routing, Link-State Routing, and Path-Vector Routing. Unicast Routing Protocols: Internet Structure, Routing Information Protocol (RIP), Open Shortest Path First (OSPF), and Border Gateway Protocol Version 4 (BGP4).

9 Hours

UNIT IV

Introduction to Transport Layer

Introduction: Services, Port Numbers, User Datagram Protocol: User Datagram. UDP Services, UDP Applications. Transmission Control Protocol: TCP Services, TCP Features, Segment, A TCP connection, Windows in TCP, Flow Control, Error Control, TCP Congestion Control, TCP Timers
7 Hours

UNIT V
Introduction to Application Layer World Wide Web and HTTP, FTP: Two connections, Control connection, Data Connection, Electronic Mail: Architecture, Web-Based Mail, Secure Shell (SSH): Components, Applications, DNS: Name Space, DNS as Internet
8 Hours

TEXT BOOKS

1	Behrouz A. Forouzan	Data Communications and Networking, 5 th Edition, McGraw-Hill, 2013.

2.	Alberto Leon-Garcia and Indra Widjaja	Communication Networks, 2 nd Edition, McGraw-Hill, 2003.

Course Outcomes:

Upon completion of this course the student will be able to:	
CO1.	Analyze the network services, configuration and performance of network layer.
CO2.	Design subnets and calculate the IP addresses to fulfil network requirements of an organization.
CO3.	Analyze and Apply various routing algorithms to find shortest paths for packet delivery.
CO4.	Analyze the Transport Layer Protocols (UDP, TCP) for reliable and unreliable communication.
CO5.	Identify the protocols, features and operations of various standard application layer protocols.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

Computer Network Laboratory

Contact Hours/ Week:	2P	Credits:	1
Total Practical Hours:	26	CIE Marks:	50
Sub. Code:	S6ISL01	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand resource requirements, packet loss and security in communication networks.
2.	Describe network configuration using different network devices.
3.	Implement various algorithms for routing, error detection, and correction.
4.	Design and apply client-server programs using the socket and IPC channel concepts.

List of Laboratory Programs

1.	a. Configure and analyze the working of basic router/gateway setup using the Cisco packet tracer. b. Create Write program for error detecting code using CRC algorithm.
2.	a. Create and analyze static routing using min two routers using Cisco packet tracer. b. Write a program to implement Distance Vector routing algorithm to build a routing table
3.	a. Configure and analyze VLAN on a small network of 4 switches using Cisco Packet Tracer. b. Using TCP/IP sockets, write a client – server program, the client sends the file name and the server sends back the content of requested text file if present.
4.	a. Configure and analyze the network of 4 nodes and update the port security using Cisco packet tracer. b. Write a client server echo program using UDP socket. .
5.	a. Examine HTTP and DNS protocols by capturing the packets using Wireshark. b. Write a program to find the first and last address in a block given any addresses in the block and assume classless addressing.
6.	a. Investigate TCP, UDP and IP protocols by capturing the packets using Wireshark. b. Write a program to simulate the action of forwarding in a router given the routing table and destination address of a packet, it should find the outgoing interface.

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Analyze the data from a live network or from captured file using Wireshark and utilize for different services.
CO2.	Develop the network algorithms such as routing and error correction using any programming language.
CO3.	Analyze and demonstrate network utilities to diagnose TCP/IP problems and security issues.
CO4.	Analyze and Evaluate the behavior of network topologies and protocols under different conditions.

Cloud Computing

Contact Hours/ Week:	3	Credits:	3
Total Lecture Hours:	42	CIE Marks:	50
Course Code:	S6ISPEC021	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand various virtualization techniques, the role of hypervisors, and resource management strategies.
2.	Analyze cloud service models, data-center architectures, and interconnection networks for designing scalable cloud platforms.
3.	Explore data management support using platforms like Amazon AWS and Microsoft Azure.
4.	Understand fog computing architecture and its role in supporting time-sensitive IoT applications.
5.	Evaluate Internet of Things communication protocols and applications.

UNIT I

Virtual Machines and Virtualization of Clusters and Data Centers: Implementation Levels of Virtualization: Levels of Virtualization Implementation, VMM Design Requirements and Providers, Virtualization Support at the OS Level, Middleware Support for Virtualization, Virtualization Structures/Tools and Mechanisms: 1 Hypervisor and Xen Architecture, Binary Translation with Full Virtualization, Para-Virtualization with Compiler Support, Virtualization of CPU, Memory, and I/O Devices: Hardware Support for Virtualization, CPU Virtualization, Memory Virtualization, Virtual Clusters and Resource Management: Physical versus Virtual Clusters, Live VM Migration Steps and Performance Effects, Virtualization for Data-Center Automation: Server Consolidation in Data Centers, Virtual Storage Management, Cloud OS for Virtualized Data Centers.

Text book 1: Chapter 3

9 Hours

UNIT II

CLOUD PLATFORM ARCHITECTURE OVER VIRTUALIZED DATA CENTERS: Cloud Computing and Service Models: Public, Private, and Hybrid Clouds, Cloud Ecosystem and Enabling Technologies, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS) and Software-as-a-Service (SaaS), Data-Center Design and Interconnection Networks: Warehouse-Scale Data-Center Design, Data-Center Interconnection Networks, Modular Data Center in Shipping Containers, Interconnection of Modular Data Centers, Data-Center Management Issues. Architectural Design of Compute and Storage Clouds: A Generic Cloud Architecture Design, Layered Cloud Architectural Development. Public Cloud Platforms: Public Clouds and Service Offerings, Amazon Web Services (AWS).

Text book 1: Chapter 4

9 Hours

UNIT III

CLOUD PROGRAMMING AND SOFTWARE ENVIRONMENTS: Features of Cloud and Grid

Platforms: Cloud Capabilities and Platform Features, Traditional Features Common to Grids and Clouds, Data Features and Databases, Programming and Runtime Support: Programming on Amazon AWS: Programming on Amazon EC2, Amazon Simple Storage Service (S3), Amazon Elastic Block Store (EBS) and SimpleDB, Microsoft Azure Programming Support.

Text book 1: Chapter 6

8 Hours

UNIT IV

FOG COMPUTING AND ITS APPLICATIONS: Introduction: Essential characteristics in fog computing, Fog nodes, Fog node deployment model. View of a Fog Computing Architecture: Node view, System view, Software view. Fog Computing in IoT: Importance of Fog Computing, Time sensitiveness in Fog Computing. Selected Applications of Fog Computing.

Text book 2 : Chapter 11

8 Hours

UNIT V

IOT COMMUNICATION TECHNOLOGIES: Introduction, Infra Structure Protocols, Discovery Protocol, Data Protocols: MQTT, SOAP, REST, Identity Protocols: EPC, uCode, URIs. **IOT CASE STUDIES AND FUTURE TRENDS:** Agricultural IoT: Introduction, Case Studies, Vehicular IoT: Introduction, Case Studies, Healthcare IoT: Introduction, Case Studies.

Text book 2 : Chapter 8,12,13,14

2	Arshdeep Bahga, Vijay Madiseti	Cloud Computing , A hands on Approach, Universities Press, 2024

Course Outcomes:

Upon completion of this course the student will be able to:

CO1	Describe virtualization techniques, hypervisors, and resource management strategies for efficient data-center automation.
CO2	Describe cloud service models, data-center architectures, and interconnection networks to design scalable and efficient cloud platforms.
CO3	Understand cloud and grid computing platforms, their features, data management techniques, and programming support using Amazon AWS and Microsoft Azure.

CO4	Describe fog computing architectures for Internet of Things applications, addressing time-sensitive and resource intensive computing needs.
CO5	Understand IoT communication protocols, and analyze their applications through case studies in agriculture, vehicular systems, and healthcare.

Generative AI and Prompt Engineering

(Professional Elective Course-2)

Contact Hours/ Week:	3	Credits:	3
Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S6ISPEC022	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand the fundamentals of generative modeling and distinguish between generative and discriminative approaches in machine learning.
2.	Explore deep generative architectures such as Variational Autoencoders (VAEs), Generative Adversarial Networks (GANs), and their extensions.
3.	Apply sequence modeling techniques using Recurrent Neural Networks (RNNs), LSTMs, Transformers, and attention mechanisms for creative tasks like text and music generation.
4.	Design and implement applications using Large Language Models (LLMs) through frameworks like LangChain, emphasizing modularity and retrieval-augmented generation (RAG).
5.	Master the principles of prompt engineering , optimizing interactions with models like ChatGPT for diverse practical use cases including content creation, research, and analysis.

UNIT I

Introduction to Generative Deep Learning: Generative Modeling: What Is Generative Modeling?, Generative Versus Discriminative Modeling, Advances in Machine Learning, The Rise of Generative Modeling, The Generative Modeling Framework, Probabilistic Generative Models, Hello Wrodl!, Your First Probabilistic Generative Model, Naive Bayes, Hello Wrodl! Continued, The Challenges of Generative Modeling, Representation Learning.

8 Hours

UNIT II

Introduction to Deep Learning, Variational Autoencoders: Autoencoders, The Encoder, The Decoder, Joining the Encoder to the Decoder, Analysis of the Autoencoder, The Variational Art Exhibition, Building a Variational Autoencoder, Morphing Between Faces. Generative Adversarial Networks Introduction, Deep Convolutional GAN (DCGAN), The Discriminator, The Generator, Training the DCGAN, Analysis of the DCGAN.

8 Hours

UNIT III

Autoregressive Models: Introduction, Long Short-Term Memory Network (LSTM), Working with Text Data, Tokenization, Creating the Training Set, The LSTM Architecture, The Embedding Layer, The LSTM Layer, The LSTM Cell, Training the LSTM, Analysis of the LSTM, Recurrent Neural Network (RNN) Extensions, Stacked Recurrent Networks, Gated Recurrent Units

8 Hours

UNIT IV	
Diffusion Models: Introduction, Denoising Diffusion Models (DDM), The Flowers Dataset, The Forward Diffusion Process, The Reparameterization Trick, Diffusion Schedules, The Reverse Diffusion Process, The U-Net Denoising Model, Transformer: Introduction, GPT, The Wine Reviews Dataset, Attention, Queries, Keys, and Values, Multihead Attention, Causal Masking, The Transformer Block, Positional Encoding, Training GPT, Analysis of GPT, Other Transformers, T5, GPT-3 and GPT-4	
8 Hours	
UNIT V	
Introduction: Prompt Engineering, Introduction to ChatGPT, Understanding Input and Output Processing, How ChatGPT Processes Input Prompts, How ChatGPT Generates Output Responses, The Importance of Prompt Engineering, Use Cases for ChatGP, Leveraging ChatGPT For Different Use Cases, Using ChatGPT for Marketing and Content Creation, Using ChatGPT for Research and Data Analysis, ChatGPT Responses, Evaluating and Refining, ChatGPT's Responses, Improving ChatGPT's Responses, Resources and Tools.	
8 Hours	

CO Code	Course Outcome
CO1	Explain the key principles of generative modeling and compare probabilistic models with discriminative ones.
CO2	Construct and analyze autoencoders and GANs for generative tasks such as image transformation and synthesis.
CO3	Build and evaluate RNN-based models for text and music generation, incorporating attention and Transformer-based architectures.
CO4	Develop LLM-powered applications using LangChain by integrating memory, agents, tools, and retrieval mechanisms.
CO5	Design effective prompts and iteratively refine ChatGPT responses for varied domains like marketing and research.

TEXT BOOKS		
1	David Foster	Generative Deep Learning Teaching Machines to Paint, Write, Compose and Play 2 nd Edition, O'Reilly publication. 2023.
2	Harish Bhat	Demystifying Prompt Engineering, 1 st Edition, 2023

REFERENCE BOOKS		
1	Numa Dhamani, Maggie Engler	Introduction to Generative AI, Publisher(s): Manning Publications, February 2024.

2	James Phoenix, Mike Taylor	Prompt Engineering for Generative AI: Future-Proof Inputs for Reliable AI Outputs O'Reilly Media 1 st Edition, 2024

Course Outcomes:

Upon completion of this course the student will be able to:

CO1.	Analyze the fundamental and advanced concepts of Generative AI and Large Language Models.
CO2.	Demonstrate the implementation of fine-tuning and optimization of LLMs for various tasks using appropriate tools like Hugging face, Langchain, etc.
CO3.	Design effective prompts for diverse applications and understand the ethical implications of AI model design.
CO4.	Illustrate the potential risks associated with Generative AI and strategies for risk mitigation.

Neuro-Computing and Deep Learning (Professional Elective Course-3)

Contact Hours/ Week:	3	Credits:	3
Total Lecture Hour:	40	CIE Marks:	50
Sub. Code:	S6ISPEC023	SEE Marks:	50

Course objectives:

This course will enable students to:

1. Understand the evolution of artificial neural networks.
2. Summarize the different models of ANN.
3. Explore the philosophy and working of Deep Forward Neural Networks.
4. Discuss the salient features and benefits of Associative Neural Networks.
5. Acquire the knowledge of the significance of Competitive and SOFM nets.

UNIT I

Introduction To Neural Networks: Neural Processing, Overview of Neural Networks, The rise of neuro-computing, Definition of Neural Network, Introduction to Neural Networks, Historical Developments of Neural Networks, Biological Neural Networks, Comparison between the Brain and the computer, Comparison between Artificial and Biological Neural Networks, Basic Building Blocks of Artificial Neural Network. (Chapter 1, Text Book 1)

8 Hours

UNIT II

Fundamental Models of ANN: McCulloch-Pitts Neuron Model: Learning Rules: Hebbian Learning Rule, Perceptron Learning Rule, Delta Learning Rule, Competitive Learning Rule, Outstar Learning Rule, Boltzmann Learning Rule, Hebbian Network, Perceptron Networks: Architecture, Algorithm and Application Procedure, Adaline and Madaline Networks:

Feed Forward Networks: Structure, Delta rule, generalized Delta Rule, Architecture, Training extensions, Practical considerations, Generalization, Pruning Techniques, advantages and disadvantages, applications.

8 Hours

UNIT III

Deep Forward Neural Networks: Definition of Deep Forward Neural Networks, Brief Survey on Deep Neural Networks, Advantages and Disadvantages of Deep Neural Network, Applications of Deep Neural Networks, Deep Neural Network Architecture, Learning in Deep forward Neural Networks. (Chapter No.1 and Chapter No. 3 of Text Book 2)

8 Hours

UNIT IV

Associative Memory Neural Networks: Introduction, Algorithms for Pattern Associations, Hetero Associative Memory Neural Networks, Auto Associative Memory Neural Networks, Bi-Directional Associative Memory Neural Networks. (Chapter 6, Text Book 1)

8 Hours

UNIT V

Competitive And Self-Organizing Networks: Introduction: general clustering procedures, competitive learning architectures and algorithms, self-organizing feature maps. (Chapter 9, Text Book 1)

8 Hours

TEXT BOOKS

1	S. N. Shivanadam, S Sumathi, S N Deepa	Introduction to Neural Networks using MATLAB 6.0, TMH Publishing House, New Delhi, 2 nd Reprint 2017.

3	Robert J Schalkoff	Artificial Neural Networks, Mc Graw Hill, International Edition, 1997.
4	B. Yegnanarayana	Artificial Neural Networks, PHI 1999.

Course Outcomes:

Upon completion of this course the student will be able to:

- CO1.** Describe the fundamental concepts of ANN.
- CO2.** Analyze and apply the different ANN models to solve the real world problems.
- CO3.** Describe the fundamental issues with Deep Neural Networks.
- CO4.** Analyze and Apply training and testing algorithms to design Associative NN.
- CO5.** Evaluate the salient features and significance of Competitive and SOFM nets.

File Structures (Professional Elective Course-4)

Contact Hours/ Week:	3	Credits:	3
----------------------	---	----------	---

Total Lecture Hours:	40	CIE Marks:	50
Sub. Code:	S6ISPEC024	SEE Marks:	50

Course objectives:

This course will enable students to:

1.	Understand the fundamentals of file structures and their management.
2.	Evaluate the performance of different file structures.
3.	Organize different file structures in the memory.
4.	Demonstrate hashing and indexing techniques.
5.	Applying the techniques in the design of C++ programs for solving various file management problems.

UNIT I

Introduction: File Structures: The Heart of the file structure Design, A Short History of File Structure Design, A Conceptual Toolkit; Fundamental File Operations: Physical Files and Logical Files, Opening Files, Closing Files, Reading and Writing, Seeking, Special Characters, The Unix Directory Structure, Physical devices and Logical Files, File-related Header Files, UNIX file System Commands; Secondary Storage and System Software: Disks, Magnetic Tape, Disk versus Tape; CD-ROM: Introduction, Physical Organization, Strengths and Weaknesses; Storage as Hierarchy, A journey of a Byte, Buffer Management, Input /Output in UNIX. Fundamental File Structure Concepts, Managing Files of Records: Field and Record Organization, Using Classes to Manipulate Buffers, Using Inheritance for Record Buffer Classes, Managing Fixed Length, Fixed Field Buffers, An Object-Oriented Class for Record Files, Record Access, More about Record Structures, Encapsulating Record Operations in a Single Class, File Access and File Organization.

8 Hours**UNIT II**

Organization Of Files For Performance, Indexing: Data Compression, Reclaiming Space in files, Internal Sorting and Binary Searching, Keysorting; What is an Index? A Simple Index for Entry-Sequenced File, Using Template Classes in C++ for Object I/O, Object-Oriented support for Indexed, Entry-Sequenced Files of Data Objects, Indexes that are too large to hold in Memory, Indexing to provide access by Multiple keys, Retrieval Using Combinations of Secondary Keys, Improving the Secondary Index structure: Inverted Lists, Selective indexes, Binding.

8 Hours**UNIT III**

Consequential Processing And The Sorting Of Large Files: A Model for Implementing Cosequential Processes, Application of the Model to a General Ledger Program, Extension of the Model to include Mutiway Merging, A Second Look at Sorting in Memory, Merging as a Way of Sorting Large Files on Disk. Multi-Level Indexing and B-Trees: The invention of B-Tree, Statement of the problem, Indexing with Binary Search Trees; Multi-Level Indexing, B-Trees, Example of Creating a B-Tree, An Object-Oriented Representation of B-Trees, B-Tree Methods; Nomenclature, Formal Definition of B-Tree Properties, Worst-case Search Depth, Deletion, Merging and Redistribution, Redistribution during insertion; B* Trees, Buffering of pages; Virtual B-Trees; Variable-length Records and keys.

8 Hours

UNIT IV	
Indexed Sequential File Access And Prefix B + Trees: Indexed Sequential Access, Maintaining a Sequence Set, Adding a Simple Index to the Sequence Set, The Content of the Index: Separators Instead of Keys, The Simple Prefix B+ Tree and its maintenance, Index Set Block Size, Internal Structure of Index Set Blocks: A Variable-order B- Tree, Loading a Simple Prefix B+ Trees, B-Trees, B+ Trees and Simple Prefix B+ Trees in Perspective.	
8 Hours	
UNIT V	
Hashing: Introduction, A Simple Hashing Algorithm, Hashing Functions and Record Distribution, How much Extra Memory should be used?, Collision resolution by progressive overflow, Buckets, Making deletions, Other collision resolution techniques, Patterns of record access. Extendible Hashing: How Extendible Hashing Works, Implementation, Deletion, Extendible Hashing Performance, Alternative Approaches.	
8 Hours	

TEXT BOOKS		
1	Michael J. Folk, Bill Zoellick, Greg Riccardi	File Structures-An Object Oriented Approach with C++, 3 rd Edition, Pearson Education, 2002. (Chapters 1 to 12 excluding 1.4, 1.5, 5.5, 5.6, 8.6, 8.7, 8.8)

REFERENCE BOOKS		
1	K. R. Venugopal, K.G. Srinivas, P.M. Krishnaraj	File Structures Using C++, Tata McGraw-Hill, 2008.
2	Dean Wampler	Programming Hive, O'Reilly, Kindle Publication, 1 st Edition, 2012.

Course Outcomes:	
Upon completion of this course the student will be able to:	
CO1.	Describe an appropriate file structure for file processing operations and storage representation.
CO2.	Apply object orientated concepts for manipulation of different types of records
CO3.	Apply concepts of sorting and merging on multiple files.
CO4.	Analyze the sequential and indexing file accessing techniques with appropriate data structures.
CO5.	Illustrate and Apply the hashing techniques to organize file structures.

Mapping of Course Outcomes (COs) to Program Outcomes (POs) & Program Specific Outcomes (PSOs)

	POs											PSOs			
		1	2	3	4	5	6	7	8	9	10	11	1	2	3

Applicable for the academic year 2025-26

COs	CO1		3											2	
	CO2	3	3	2										2	
	CO3		2	2										2	
	CO4		2	2										2	
	CO5	3	3											2	
AVG		3	3	2										2
